

Accessibility Evaluation Report – Breeze Airways iOS App

1. Executive Summary

This report summarizes the accessibility evaluation of the Breeze Airways iOS app, based on a review of key user flows including account setup, booking (solo and multiple passengers), and post-booking interactions. The evaluation was conducted against WCAG 2.2 Level A and AA success criteria. Tools used include Xcode Accessibility Inspector, VoiceOver (iOS).

Common barriers identified include unlabeled interactive elements, insufficient color contrast, inaccessible modal dialogs. Recommendations are included for each issue.

2. WCAG 2.2 A, AA Conformance Summary

WCAG 2.2 Success Criterion	Support	Remarks & Explanations
1.1.1 Non-text Content	Partially Supports	Some images and icons lack alternative text.
1.2.1 Prerecorded Audio-only and Video - only	Not Applicable	No time-based media was observed in the sample.
1.2.2 Captions (Prerecorded)	Not Applicable	The App does not contain any synchronized media with prerecorded audio content requiring captions.
1.2.3 Audio Description or Media Alternative (Prerecorded)	Not Applicable	The App does not contain any time-based media or synchronized media with pre-recorded video content.

WCAG 2.2 Success Criterion	Support	Remarks & Explanations
1.2.4 Captions (Live)	Not Applicable	The App does not contain live Synchronized captions for live media that contains audio.
1.2.5 Audio Description (Prerecorded)	Not Applicable	The App does not contain any time-based media or synchronized media with pre-recorded video content.
1.3.1 Info and Relationships	Does Not Support	The App does not convey the information and relationships for many UI elements programmatically. Some example/instances where the criteria does not meet the requirements are: ● Incorrect heading structure ● Missing tab positions ● Missing required information on form fields
1.3.2 Meaningful Sequence	Partially Supports	In App, most of the content on the screens support meaningful reading sequence, which does not restrict assistive technology to read the content correctly to make the user fully understand the intended meaning. However, some example/instances where the criteria does not meet the requirements are: ● VoiceOver taking extra swipe on text. VoiceOver taking an extra swipe on the '\$<n>' texts present on the screen. On the first swipe focus go to '\$' symbol and on second swipe go to '<n>' text. ● VoiceOver focus is moving to the decorative image present above 'Fly with your pet' text present on 'Add Extras' page.

WCAG 2.2 Success Criterion	Support	Remarks & Explanations
1.3.3 Sensory Characteristics	Supports	Instructions provided for understanding and operating content do not rely solely on sensory characteristics of components such as shape, color, size, visual location, orientation, or sound.
1.3.4 Orientation	Does Not Support	The App content restricts its view and operation to a single display orientation, such as portrait.
1.3.5 Identify Input Purpose	Supports	The purpose of each input field collecting information about the user can be programmatically determined.
1.4.1 Use of Color	Supports	Color is not used as the only visual means of conveying information, indicating an action, prompting a response, or distinguishing a visual element.
1.4.2 Audio Control	Not Applicable	The App does not contain any audio that plays automatically for more than 3 seconds.
1.4.3 Contrast (Minimum)	Does not Support	The App does not pass the contrast ratio as 4.5:1 of many UI elements. Some example/instances where the criteria does not meet the requirements are: ● Button text fail color contrast ratio

WCAG 2.2 Success Criterion	Support	Remarks & Explanations
		- Placeholder texts fail color contrast ratio - Non selected Tab text fail color contrast ratio - Insufficient color contrast ratio for text
1.4.4 Resize Text	Does Not Support	App is not able to resize the content upto the larger option.
1.4.5 Images of Text	Supports	If the technologies being used can achieve the visual presentation, text is used to convey information rather than images of text.
1.4.10 Reflow	Not Applicable	Mobile device don't have any option to reflow the content.
1.4.11 Non-text Contrast	Does not Support	Most of the non-text contents present in the App don't meet the minimum contrast ratio of 3:1. However :- Some example/instances where the criteria does not meet the requirements are: - Icons fail color contrast ratio - Checkboxes fail color contrast ratio - Outline of the edit fields fails the color contrast ratio

WCAG 2.2 Success Criterion	Support	Remarks & Explanations
1.4.12 Text Spacing	Not Applicable	Mobile App don't have any option to apply the text spacing.
1.4.13 Content on Hover or Focus	Supports	Content presented on keyboard focus is dismissable and persistent.
2.1.1 Keyboard	Supports	All functionality is available using the keyboard unless it cannot be accomplished in any known way using a keyboard (e.g., free hand drawing).
2.1.2 No Keyboard Trap	Supports	Keyboard focus is never locked or trapped at one particular element.
2.1.4 Character Key Shortcuts	Not Applicable	The App does not contain Character Key Shortcuts.
2.2.1 Timing Adjustable	Not Applicable	The App does not impose a time-out limit to the users.
2.2.2 Pause, Stop, Hide	Not Applicable	The App does not contain any control which requires the option to pause, stop, hide for all the content that blinks, scrolls, or updates regularly.
2.3.1 Three Flashes or Below Threshold	Not Applicable	The App does not provide any content that flashes more than three times in one second or below thresholds.

WCAG 2.2 Success Criterion	Support	Remarks & Explanations
2.4.1 Bypass Blocks	Supports	A mechanism is available to bypass blocks of content that are repeated on multiple pages.
2.4.2 Page Titled	Supports	Pages have titles that describe the topic or purpose.
2.4.3 Focus Order	Supports	Pages can be navigated sequentially and the sequence affects meaning or operation, focusable components receive focus in an order that preserves meaning and operability.
2.4.4 Link Purpose (In Context)	Supports	The purpose of each link can be determined from the link text or its context.
2.4.5 Multiple Ways	Supports	Multiple ways are available to navigate the pages within the site.
2.4.6 Heading and Labels	Partially Supports	Most of the visually appearing headings are defined programmatically. However :- Example where the criteria does not meet the requirement is: ● Visual headings announced as plain text
2.4.7 Focus Visible	Supports	Visual focus indicators are present When elements have keyboard focus, they are not entirely covered or hidden by page content.

WCAG 2.2 Success Criterion	Support	Remarks & Explanations
2.4.11 Focus Not Obscured (Minimum)	Supports	When elements have keyboard focus, they are not entirely covered or hidden by page content.
2.5.1 Pointer Gestures	Supports	If multipoint or path-based gestures (such as pinching, swiping, or dragging across the screen) are not essential to the functionality, then the functionality can also be performed with a single point activation (such as activating a button).
2.5.2 Pointer Cancellation	Supports	The App supports pointer cancellation and no down-event.
2.5.3 Label in Name	Partially Supports	In the App, most of the accessible names of user interface controls match their visual labels. However :- Example where the criteria does not meet the requirement is: ● Accessible name does not start from the visible name of button
2.5.4 Motion Actuation	Supports	Functionality that is triggered by moving the device (such as shaking or panning a mobile device) or by user movement (such as waving to a camera) can be disabled and equivalent functionality is provided via standard controls like buttons.
2.5.7 Dragging Movements	Not applicable	The App does not have any functionality that uses pointer dragging.

WCAG 2.2 Success Criterion	Support	Remarks & Explanations
2.5.8 Target Size (Minimum)	Supports	Pointer input target sizes are at least 24 by 24 pixels unless a 24-pixel diameter circle centered on the target element does not intersect with any other target or a 24-pixel circle centered on an adjacent target, the functionality can be achieved in some other conformant manner, the target is in a sentence or list, or the target size can't be modified or is essential to the functionality.
3.1.1 Language of Page	Supports	The language of the page is defined for the app.
3.1.2 Language of Parts	Not applicable	The App does not contain any different language of page content.
3.2.1 On Focus	Supports	When a page element receives focus, it does not trigger a substantial change to the page.
3.2.2 On Input	Supports	When a user inputs information or interacts with a control, it does not trigger a substantial change to the page.
3.2.3 Consistent Navigation	Supports	Navigation links that are repeated on web pages do not change order when navigating through the site.
3.2.4 Consistent Identification	Supports	Repeated elements and structures behave consistently with internet standards and each other.

WCAG 2.2 Success Criterion	Support	Remarks & Explanations
3.2.6 Consistent Help	Supports	Contact and self-help details or functionality are presented consistently when present on multiple web pages.
3.3.1 Error Identification	Does not Support	In the App, screen reader does not identify error messages on the form elements that provide information about input errors in text that allows assistive technology users to perceive an error. However:- Example/instance where the criteria does not meet the requirement are: ● Error message is not announced by the screen reader ● Error message is not appearing after activating button without data
3.3.2 Labels or Instructions	Supports	Sufficient labels, cues, and instructions for required interactive elements are provided via instructions, examples, properly positioned input labels, or fieldsets/legends.
3.3.3 Error Suggestion	Does not Support	The App does not provide descriptive error suggestions on the form fields to ensure that users receive appropriate suggestions for correction of an input error. However:- Example where the criteria does not meet the requirement is: ● Insufficient error suggestion provided for the edit fields
3.3.4 Error Prevention (Legal, Financial, Data)	Supports	If the user can change or delete legal, financial, or test data, the

WCAG 2.2 Success Criterion	Support	Remarks & Explanations
		changes/deletions can be reversed, verified, or confirmed.
3.3.7 Redundant Entry	Supports	Information that a user must re-enter to complete a single-session process must be auto-populated or available for the user to select, unless re-entering the information is essential to the functionality, the information poses security issues, or the previously-entered information is no longer valid.
3.3.8 Accessible Authentication (Minimum)	Supports	A cognitive function test (such as remembering a password or solving a puzzle) is not required for any step in an authentication process unless the cognitive function test can be bypassed in some way, can be completed with assistance by some other mechanism, uses object recognition (such as "click on the photo of a flower"), or uses identification of non-text content provided by the user (such as a user-provided image).
4.1.2 Name, Role, Value	Does Not Support	In the App, name, role, state is not defined for most of the UI elements programmatically which limits the screen reader users to understand the functionality and current state and role of the control. Some example/instances where the criteria does not meet the requirements are: ● Incorrect role defined for link ● Missing role for the control ● Missing label for buttons

WCAG 2.2 Success Criterion	Support	Remarks & Explanations
		- Name is not announced for the dialog - Expand Collapse state missing for menu button
4.1.3 Status Messages	Partially Supported	The App does not provide status messages programmatically that can be determined by the assistive technology users for most of the action performed. However:- Some example/instances where the criteria does not meet the requirement is: Status information not announced by VoiceOver

3. Severity Ratings

Issues are classified using the following severity levels:

- **Critical:** Blocks access to essential content or functionality.
- **Significant:** Major barriers that make interaction very difficult.
- **Moderate:** Issues that hinder usability for some users.
- **Enhancement:** Non-blocking issues that could improve usability.

4. Common Issues and Concepts

The following common issues were found across multiple screens:

- [WCAG 1.4.3 Contrast \(Minimum\) \(Level AA\)](#) - Moderate

1. Button text fail color contrast ratio

Actual: The color contrast ratio of the 'Continue' button text having '#F1F7FE' foreground color against '#2278E1' background color is measured to be at 4:1, which fails the minimum requirement.

Expected: 'Continue' button text has a regular font size, so as per the WCAG, the color contrast ratio of the text should be at least 4.5:1.

Dev Recommendation: Use darker background color #1D6FD3 for the highlighted text to pass the color contrast ratio.

Refer to:

<https://www.w3.org/WAI/WCAG22/Understanding/contrast-minimum.html>

Screenshot: <https://app.screencast.com/izle9NCFecAG2>

2. Placeholder texts fail color contrast ratio

Actual: Color contrast ratio of the edit field placeholder text having '#949494' foreground color against '#FFFFFF' background color is measured to be at 3:1, which fails the minimum requirement.

Expected: edit field placeholder text has a regular font size, so as per the WCAG, the color contrast ratio of the text should be at least 4.5:1.

Dev Recommendation: Use darker Foreground color #757575 for the highlighted text to pass the color contrast ratio.

Refer to:

<https://www.w3.org/WAI/WCAG22/Understanding/contrast-minimum.html>

Screenshot: <https://app.screencast.com/7se9fOxWNvqgv>

3. Link text fail color contrast ratio

Actual: Color contrast ratio of the blue color text with white background having '#1F74DF' foreground color against '#FAFAFA' background color is measured to be at 4.4:1, which fails the minimum requirement.

Expected: blue color text with white background has a regular font size, so as per the WCAG, the color contrast ratio of the link text should be at least 4.5:1.

Dev Recommendation: Use darker foreground color #1D71D7 for the highlighted text to pass the color contrast ratio.

Refer to:

<https://www.w3.org/WAI/WCAG22/Understanding/contrast-minimum.html>

Screenshot: <https://app.screencast.com/otCWA1XfiKyF4>

4. Text fail color contrast ratio

Actual: Color contrast ratio of the 'No airport found' text having '#CCCCCC' foreground color against '#FFFFFF' background color is measured to be at 1.6:1, which fails the minimum requirement.

Expected: 'No airport found' text has a regular font size, so as per the WCAG, the color contrast ratio of the text should be at least 4.5:1.

Dev Recommendation: Use darker foreground color #757575 for the highlighted text to pass the color contrast ratio.

Refer to:

<https://www.w3.org/WAI/WCAG22/Understanding/contrast-minimum.html>

Screenshot:

1. <https://app.screencast.com/lrfRQZs0Yh9qb>
2. <https://app.screencast.com/cle8fUxfbcgln>

- **WCAG 1.4.11 Non-text Contrast (Level AA 2.1 only) - Significant**

1. **Checkbox fail color contrast ratio**

Actual: Color contrast ratio of the 'Changing this email...' checkbox having '#D1D5DB' foreground color against '#FFFFFF' background color is measured to be at 1.5:1, which fails the minimum requirement.

Expected: 'Changing this email...' checkbox is a graphical object, so as per the WCAG, the color contrast ratio of this checkbox should be at least 3.0:1 against the adjacent colors.

Dev Recommendation: "Use Foreground Color: #86919C with Background Color: #FFFFFF (Gives Color Contrast Ratio: 3.2:1) for the 'Show/Hide password' icon.

Refer to:

<https://www.w3.org/WAI/WCAG22/Understanding/non-text-contrast.html>

Screenshot: <https://app.screencast.com/wTuS9Nnj1arTN>

2. **Outline of the edit fields fails the color contrast ratio**

Actual: The color contrast ratio of the outline of the 'Address line 1*' edit field having '#D1D5D8' foreground color against '#FFFFFF' background color is measured to be 1.5:1, which fails the minimum requirement.

Expected: The outline of the 'Address line 1*' edit field is a graphical object, so as per the WCAG, the color contrast ratio of this outline should be at least 3.0:1 against the adjacent colors.

Dev Recommendation: Use Border/Outline Color: #779B9C with Background Color: #FFFFFF (Gives Color Contrast Ratio: 3.02:1) for the radio buttons.

Refer to:

<https://www.w3.org/WAI/WCAG22/Understanding/non-text-contrast.html>

Screenshot: <https://app.screencast.com/VogaHeqFa25I5>

3. Outline for radio button fail color contrast ratio

Actual: Color contrast ratio of the 'No, I will travel without this insurance plan.' radio button having '#D1D5DB' foreground color against '#FFFFFF' background color is measured to be at 1.5:1, which fails the minimum requirement.

Expected: 'No, I will travel without this insurance plan.' radio button is a graphical object, so as per the WCAG, the color contrast ratio of this checkbox should be at least 3.0:1 against the adjacent colors.

Dev Recommendation: Use Foreground Color: #86919C with Background Color: #FFFFFF (Gives Color Contrast Ratio: 3.2:1) for the radio button outline.

Refer to:

<https://www.w3.org/WAI/WCAG22/Understanding/non-text-contrast.html>

Screenshot:

1. <https://app.screencast.com/PCZna1915Lq7E>
2. <https://app.screencast.com/U7nFsqTa8rpzy>

● WCAG 4.1.2 Name, Role, Value (Level A) – Significant

1. Incorrect role defined for link

Actual: VoiceOver announces the incorrect role as 'Button' for the 'Continue with Google', 'Continue with Facebook' and 'Continue with Apple' link.

Expected: VoiceOver should announce the correct role as 'link' for the 'Continue with Google', 'Continue with Facebook' and 'Continue with apple' link.

Dev Recommendation: Specify the component as "UIPickerView ". This will enable VoiceOver users to understand that this is a combo box and that they need to double tap to select an option. This can be done either through the "UIPickerView" class. Provide a succinct label using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/uikit/uipickerview>

<https://developer.apple.com/documentation/objectivec/1615181-accessibility-label>

Screenshot: <https://app.screencast.com/0LKGEFQwD7a9a>

2. Missing role for the control

Actual: VoiceOver doesn't announce the role for the 'Logout' control

Expected: VoiceOver should announce the role as 'Button' for the 'Logout' control

Dev Recommendation: Specify the component as "UIPickerView". This will enable VoiceOver users to understand that this is a button and that they need to double tap in order to select a control. This can be done either through "UIPickerView" class. Provide a succinct label using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/uikit/uipickerview>

<https://developer.apple.com/documentation/objectivec/1615181-accessibility-label>

Screenshot: <https://app.screencast.com/26b3SOwCRP3e1>

3. Missing label for buttons

Actual: Account' icon control present on top left corner is missing useful accessibility information.

Expected: VoiceOver should announce the label information as 'Account' for the 'Logout' control

Dev Recommendation: "Assuming the component used to be UIButton, please set the accessibilityTraits to UIAccessibilityTraits.button.

Eg. btn.accessibilityTraits = UIAccessibilityTraits.button

Refer to:

<https://developer.apple.com/documentation/objectivec/1615202-accessibility-traits>

Screenshot: <https://app.screencast.com/pSln0VY3NKQDX>

4. Name is not announced for the dialog

Actual: VoiceOver does not announce the label for the 'Compare Bundles' dialog which appears after activating 'Compare bundles' control in the 'Flight options' page. issue has been observed in most of the dialog in the application.

Expected: VoiceOver should announce the label such as 'Compare bundles, web dialogue' for the 'Compare Bundles' dialog which appears after activating 'Compare bundles' control in the 'Flight options' page.

Dev Recommendation:

1. Assign the role of the pop-up to `UIAccessibilityTraits.alert` or `UIAccessibilityTraits.dialog` to inform the screen reader that this is a dialog.
2. Ensure that the pop-up has an accessibility label, such as ""Are you sure,"" so the screen reader announces the content appropriately.

Screenshot: <https://app.screencast.com/tClJeUzsePGAg>

5. Missing role for the control

Actual: VoiceOver doesn't announce the role for the 'Close' control present on the 'Seat Options' page.

Expected: VoiceOver should announce the role as 'Button' for the 'Close' control present on the 'Seat options' page.

Dev Recommendation: Specify the component as "UIPickerView ". This will enable VoiceOver users to understand that this is a button and that they need to double tap in order to select a control. This can be done either through the "UIPickerView" class. Provide a succinct label using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/uikit/uipickerview>

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibilitylabel>

Screenshot: <https://app.screencast.com/Jh4Y5YAKuoLp>

- **WCAG 1.3.1 Info and Relationships (Level A) – Moderate**

1. Incorrect heading structure defined for page.

Actual: VoiceOver is announcing incorrect heading information for 'Discover your next vacation' and below text:

- Be REAL ID Ready
- Stay Connected with Streaming
- Quality WiFi
- Checked Bag Included
- Earn Breeze Points with Every Purchase' text in home"

Expected: VoiceOver should announce the correct heading information as "Discover your next

vacation, heading level 2" on 'Discover your next vacation' text and below text

- Be REAL ID Ready
- Stay Connected with Streaming
- Quality WiFi
- Checked Bag Included
- Earn BreezePoints with Every Purchase' text in home

Dev Recommendation:

Add UIAccessibilityTraitHeader to all the visual headings on the page.

<https://developer.apple.com/documentation/objectivec/nsobject/1615202-accessibilitytraits>

<https://developer.apple.com/documentation/uikit/uiaccessibility/uiaccessibilitytraits/1620170-header>

Screenshot: <https://app.screencast.com/JV6MXaFtqGjSq>

2. VoiceOver not announcing descriptive information for text

Actual: VoiceOver doesn't announce the descriptive information for the '<n>H <n>M' text present in 'flight detail' tiles of the 'Select your Outbound flight' page.

Expected: VoiceOver should announce the descriptive information as "<n> hours <n> minutes" for the '<n>H <n>M' text present in 'flight detail' tiles of the 'Select your Outbound flight' page.

Dev Recommendation: Using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibilitylabel>

Screenshot: <https://app.screencast.com/HRMklQSFpoArn>

3. Safari information not announced by VoiceOver.

Actual: VoiceOver is not announcing safari information when user activates 'bag pricing' link present on 'Select your outbound Flight' page.

Expected: VoiceOver should announce safari information when user activates 'bag pricing' link present on 'Select your outbound Flight' page.

Dev Recommendation: Utilize UIAccessibilityPostNotification to inform VoiceOver users about the loading state.

Refer to:

<https://developer.apple.com/documentation/uikit/uiaccessibilitypostnotification>

Screenshot: <https://app.screencast.com/QazL95bn77uDh>

- **WCAG 1.4.4 Resize text (Level AA) – Critical**

- 1. Unable to resize the content of the home screen**

Actual: The user is unable to resize the font text within the home screen. Other

Occurrences: This issue has been observed throughout the application

Expected: Content should be resized within the home screen without truncating and overlapping.

Dev Recommendation:

For native fonts:

1. In your source code, call the preferredFont(forTextStyle:) method. to return a UIFont that you can assign to a label, text field, or text view.
2. Then set the adjustsFontForContentSizeCategory property on the text control to “true” to tell the text control to adjust the text size based on the Dynamic Type setting provided by the user (If is set to false, the font will initially be the right size, but it won't respond to text-size changes the user makes).
3. To detect such changes, override the traitCollectionDidChange(_:) method in your view or view controller, and check for changes to the content size category trait (you can also observe didChangeNotification and update the font when the notification arrives).

For custom fonts:

1. Create a scaled instance of the font in your source code.
2. Call scaledFont(for:), passing in a reference to the custom font that's at a point size suitable for use with large, which is the default value for the Dynamic Type setting (you can use this call on the default font metrics, or you can specify a text style). Note:

Although custom fonts are supported in Dynamic Type, the preferred font is designed to look good at any size and it ensures consistency within the system.

Refer to:

https://developer.apple.com/documentation/uikit/uifont/scaling_fonts_automatically?fbclid=IwAR0mK5PhyelokjtZMSKd_lpq6ec1WGCDDeMYnoAHx9zhFb-RD1J53k5LHs

Screenshot: <https://app.screencast.com/zkcOPlx3FToRf>

- **WCAG 1.1.1 Non-text Content (Level A) – Recommended**

- 1. Alternative text missing for the 'Log out' icon.**

Actual: VoiceOver does not announce the alternative text for the 'Log out' icon.

Expected: VoiceOver should announce the alternative text for the 'Log out' icon like 'Log out'.

Dev Recommendation: Using "accessibilityLabel" property so that the user can better understand the use of the element.

Best practices for alternative text:

- Less than 125 characters long.
- Don't start the alt text with expressions such as ""picture of..." or ""image of..."
- Describe the image with as much detail as possible.

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibilitylabel>

<https://developer.apple.com/documentation/uikit/accessibility/uiaccessibility>

Screenshot: <https://app.screencast.com/reAX6Syr3ILKK>

- 2. Alternative text missing for some images.**

Actual: VoiceOver does not announce the alternative text for some images.

Expected: VoiceOver should announce the alternative text for some images like '<description of images>'.

Dev Recommendation: Using "accessibilityLabel" property so that the user can better understand the use of the element.

Best practices for alternative text:

- Less than 125 characters long.
- Don't start the alt text with expressions such as ""picture of..." or ""image of..."

- Describe the image with as much detail as possible.

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibility-label>

<https://developer.apple.com/documentation/uikit/accessibility/uiaccessibility>

Screenshot:

1. <https://app.screencast.com/f7PNuPHVp5oLG>
2. <https://app.screencast.com/lkcXdqIQ6QJdX>
3. <https://app.screencast.com/SzDoTq1TGS48e>
4. <https://app.screencast.com/s5KizYgG0NLcb>

- **WCAG 1.3.2 Meaningful Sequence (Level A) - Moderate**

1. VoiceOver taking extra swipe on text

Actual: VoiceOver taking extra swipe on the '\$<n>' texts present on the screen. On the first swipe focus go to '\$' symbol and on second swipe go to '<n>' text.

Expected: VoiceOver should move once on '\$<n>' control present on the screen and announce '\$<n>' in one swipe and also in filled state

Dev Recommendation: Ensure that the user is able to navigate the app content in logical order. If a reorder of the code is not possible, use accessibility(sortPriority:) to change the order of the focus only for screen reader users.

Refer to:

<https://developer.apple.com/documentation/uikit/uifocusguide>

<https://developer.apple.com/documentation/uikit/uifocusitem>

<https://medium.com/flawless-app-stories/swiftui-accessibility-sort-priority-3c878306ef19>

Screenshot:

1. <https://app.screencast.com/kxpVjTHTh3Ey>
2. <https://app.screencast.com/GlrsIVjV6GjOt>
3. <https://app.screencast.com/J1faWZgT5czeG>
4. <https://app.screencast.com/lh5y4K9YfGdgh>

2. Heading text announced in parts

Actual: Voice Over announces the 'Select your Outbound flight' heading text in two parts.

Expected: VoiceOver should announce the 'Select your Outbound flight' heading text in one go.

VoiceOver should also announce it as heading

Dev Recommendation: Use 'isAccessibilityElement' property with the value "no" to the existing heading text and provide visually hidden text in a single line.

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615141-isaccessibilityelement>

Screenshot: <https://app.screencast.com/LlhAqiKVYWTDa>

3. VoiceOver focus is moving on some decorative element

Actual: VoiceOver focus is moving to 'double down arrow' and 'double up arrow' decorative icon present on 'Add bags' page

Expected: VoiceOver focus should not move to 'double down arrow' and 'double up arrow' decorative icon present on 'Add bags' page.

Dev Recommendation: Review and Adjust Focus Order:

Ensure that the focus order follows a logical sequence that matches the visual layout and reading order. This can be achieved by setting the accessibilityElements property on the parent view to define a custom order for VoiceOver focus

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615147-accessibilityelements>

Screenshot: <https://app.screencast.com/IIL2FMECGLRCQ>

4. VoiceOver focus order is not logical on screen

Actual: VoiceOver focus is not logical after heading as focus is moving to paragraph instead of 'Close' icon control present on the present on 'Add New Card' page.

Expected: VoiceOver focus should be logical after heading as focus should move to 'Close' icon control and then paragraph present on 'Add New Card' page.

Dev Recommendation: Review and Adjust Focus Order:

Ensure that the focus order follows a logical sequence that matches the visual layout and reading order. This can be achieved by setting the accessibilityElements property on the parent view to define a custom order for VoiceOver focus

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615147-accessibility-elements>

Screenshot: <https://app.screencast.com/YCs2K7wC1mcf4>

- **WCAG 2.4.6 Headings and Labels (Level AA) - Significant**

1. **Visual headings announced as plain text**

Actual: VoiceOver announces the visual headings as plain text:

Expected: VoiceOver should announce the heading information for the heading texts.

Dev Recommendation: Add `UIAccessibilityTraitHeader` to all the visual headings on the page.

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615202-accessibilitytraits>

<https://developer.apple.com/documentation/uikit/uiaccessibility/uiaccessibilitytraits/1620170-header>

Screenshot:

2. <https://app.screencast.com/x9E0i2I78ezxM>
3. <https://app.screencast.com/p1Lps7yDUgoP7>
4. <https://app.screencast.com/Z7qDVV2mn7qe9>
5. <https://app.screencast.com/wBccHwwiLGx4r>
6. <https://app.screencast.com/UQeWpely6F0Vc>
7. <https://app.screencast.com/Z35mx7qdFkC2Y>

- **WCAG 3.3.1 Error Identification (Level A) – Significant**

1. **Error message is not announced by the screen reader**

Actual: VoiceOver is not announcing the error message '*this field is required' appeared on the 'Name on Card' edit fields present on the 'Payment details' page.

Expected: VoiceOver should announce the error message '*this field is required' when appearing on the 'Name on Card' edit fields present on the 'Payment details' page.

Dev Recommendation:

Provide a succinct label along with the text "(Required)" using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibility-label>

<https://developer.apple.com/documentation/uikit/accessibility/uiaccessibility>

Screenshot:

1. <https://app.screencast.com/PSvnRv5LLEnzV>
2. <https://app.screencast.com/29qUjXWkrJouZ>
3. <https://app.screencast.com/FhtZINALywSqO>

2. Error message is not appearing after activating button without data

Actual: Error message is not appearing when the user activates the 'Continue' button without filling the required edit fields present on the 'Guest info' page.

Expected: Error message should appear when user activate the 'Continue' button without filling the required edit fields present on the 'Guest info' page and focus should move to the error causing editfields

Dev Recommendation:

Validation Logic:

Implement validation logic to check if all required fields are filled before allowing the 'Continue' button to proceed. This can be done by adding a validation function that runs when the button is pressed.

Error Message Display:

If the validation fails, display an error message to inform the user which fields are missing. This can be done using a UILabel or an alert dialog to ensure visibility.

Screenshot: <https://app.screencast.com/pQEYrWu5Kh2Lj>

● [WCAG 3.3.3 Error Suggestion \(Level AA\)](#) - Significant

1. Insufficient error suggestion provided for the edit fields

Actual: Currently VoiceOver announces the error message '*this field is required' for the 'Name on Card' edit fields present on the 'Payment details' page. - Same issue observed on the 'Card number', 'Expiration card', 'CVV code', 'Country', 'Address', 'City', 'State' and 'Zipcode'

Expected: Error suggestion should be sufficient and unique for all the required fields:

- Please Enter your Name

Dev Recommendation: Provide specific and descriptive error messages for each erroneous form field.

Screenshot:

1. <https://app.screencast.com/PSvnRv5LLEnzV>
2. <https://app.screencast.com/29qUjXWkrJouZ>

- **WCAG 1.3.4 Orientation (Level AA) - Critical**

1. **User unable to switch display orientation**

Actual: The users are unable to change the app view mode from portrait to landscape.

Expected: The users should be able to use the application in both the view mode 'Portrait' and 'Landscape'.

Dev Recommendation: Ensure that the content of the app should appear correctly in landscape mode as well.

Refer to:

<https://mobiarch.wordpress.com/2017/04/22/controlling-screen-orientation-of-ios-apps/>

Screenshot: <https://app.screencast.com/wgixDzBUoAJbh>

Home/Flights

Path: Home

1. Incorrect role defined for link. [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) – **Moderate**

Actual: VoiceOver announces the incorrect role as 'Button' for the 'Terms apply' link.

Expected: VoiceOver should announce the correct role as 'link' for the 'Terms apply' link.

Dev Recommendation: Specify the component as "UIPickerView ". This will enable VoiceOver users to understand that this is a button and that they need to double tap to select an option. This can be done either through the "UIPickerView" class. Provide a succinct label using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/uikit/uipickerview>

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibilitylabel>

Screenshot: <https://app.screencast.com/4pGe1cDBdi3GQ>

2. Expand Collapse state missing for menu button. [WCAG 4.1.2 Name, Role, Value \(Level A\)](#)- **Moderate**

Actual: VoiceOver announces only role and label for the menu button and states as 'Expand/Collapse' is not announced by the VoiceOver.

Expected: VoiceOver should announce the state as 'Expand/Collapse' for the 'Menu' button.

Also, the screen reader should announce the initial state as 'Collapsed'.

Dev Recommendation: Make sure to add state(expand/collapsed) with VoiceOver.

Please refer to the below accessibility doc for reference.

<https://developer.apple.com/documentation/objectivec/nsobject/uiaccessibility>

Screenshot: <https://app.screencast.com/MDFj4IEVAnZZa>

3. VoiceOver not announcing position information for tab controls. [WCAG 1.3.1 Info and Relationships \(Level A\)](#) – **Moderate**

Actual: VoiceOver is not announcing position information for 'Home' tab present on 'Home' screen.

Expected: VoiceOver should announce the position information for 'Home' tab as "Selected, Home, tab 1 of 3" present on 'Home' screen.

Dev Recommendation: Ensure that the screen reader should read the content in a list. It should not read it as normal text so instead of text view, use list view for the same.

Screenshot: <https://app.screencast.com/iyF9jauwexp88>

4. Hidden content announced by the screen reader. [WCAG 1.3.2 Meaningful Sequence \(Level A\)](#) – Significant

Actual: VoiceOver announces the hidden content at the top of the corner as 'loading, Heading level 1, main, landmark'.

Expected: VoiceOver should not announce the hidden content through the screen reader.

Dev Recommendation: Use 'isAccessibilityElement' property with value 'no' to the hidden content.

Refer to:

<https://developer.apple.com/documentation/objectivec/1615141-isaccessibilityelement>

Screenshot: <https://app.screencast.com/mKhv1zeA4Ljo9>

5. Alternative text missing for some images in home page [WCAG 1.1.1 Non-text Content \(Level A\)](#) - Significant

Actual: Some images in the home page are missing useful accessibility information. Similar issue observed for images above 'Looking for Last-Minute Flights?' and below texts

- Be REAL ID Ready
- Stay Connected with Streaming-Quality WiFi
- Checked Bag Included
- Earn Breeze Points with Every Purchase' text in home

Expected: Some images in home page should provide useful accessibility information

Dev Recommendation: Using "accessibilityLabel" property so that the user can better understand the use of the element.

Best practices for alternative text:

- Less than 125 characters long.
- Don't start the alt text with expressions such as "picture of..." or "image of..."
- Describe the image with as much detail as possible.

Refer to:

<https://developer.apple.com/documentation/objectivec/1615181-accessibilitylabel> <https://developer.apple.com/documentation/uikit/accessibility/uiaccessibility>

Screenshot: <https://app.screencast.com/bcYw7ydTYqwCV>

6. Missing label for buttons - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) - **Moderate**

Actual: Control present above 'Sign up/Log in' link is missing useful accessibility information.

Expected: Control present above 'Sign up/Log in' link should define useful accessibility information.

Dev Recommendation: Assuming the component used to be UIButton, please set the accessibilityTraits to UIAccessibilityTraits.button. E.g., btn.accessibilityTraits = UIAccessibilityTraits.button

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615202-accessibilitytraits>

Screenshot: <https://app.screencast.com/kLgSy1yqlmIS9>

7. Non selected Tab text fail color contrast ratio - [WCAG 1.4.3 Contrast \(Minimum\) \(Level AA\)](#) - **Moderate**

Actual: Color contrast ratio of the grey color non-selected Tab as Home and Book text with white background having '#CED2D9' foreground color against '#FEFEFF' background color is measured to be at 1.5:1, which fails the minimum requirement.

Expected: Grey color text with white background has a regular font size, so as per the WCAG, the color contrast ratio of the link text should be at least 4.5:1.

Dev Recommendation: Use darker foreground color for the highlighted text to pass the color contrast ratio.

Refer to:

<https://www.w3.org/WAI/WCAG22/Understanding/contrast-minimum.html>

Screenshot: <https://app.screencast.com/ciwXykltf1Gnn>

Personal Details

Path: Home- > Profile-> Personal Details

1. Error notifications are not announced for screen reader - [WCAG 3.3.1 Error Identifications](#) - **Significant**

Actual: VoiceOver is not announcing error message information as '*this field is required' on the 'Legal First name' edit field.

Expected: VoiceOver should announce error message information as '*this field is required' on the 'Legal First name' edit field.

Dev Recommendation: Make sure to add error notifications with VoiceOver on all the forms.

Please refer to the below accessibility doc for reference.

<https://developer.apple.com/documentation/objectivec/nsobject/uiaccessibility>

Screenshot: <https://app.screencast.com/YpYw4xX2qHAX2>

Accounts

Path: Home-> Profile-> Accounts

1. Incorrect role defined for link - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) - **Moderate**

Actual: VoiceOver announces the incorrect role as 'Button' for the 'Terms of use' link

Expected: VoiceOver should announce the correct role as 'link' for the 'Terms of use' link

Dev Recommendation: Specify the component as "UIPickerView". This will enable VoiceOver users to understand that this is a link and that they need to double tap in order to select a control. This can be done either through "UIPickerView" class. Provide a succinct label using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/uikit/uipickerview>

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibilitylabel>

Screenshot: <https://app.screencast.com/OOGDPdIO6Qcki>

2. Missing Required information on edit fields. - [WCAG 1.3.1 Info and Relationships \(Level A\)](#)- **Significant**

Actual: The 'Temporary code' edit field is required, but the 'Required' is not identified through the VoiceOver.

Expected: VoiceOver should announce the 'Required' for the 'Temporary code' edit field.

Dev Recommendation: Provide a succinct label along with the text "(Required)" using "accessibilityLabel" property so that user can better understand the use of element.

Refer to:

<https://developer.apple.com/documentation/objectivec/namespace/1615181-accessibility-label> <https://developer.apple.com/documentation/uikit/accessibility/uiaccessibility>

Screenshot: <https://app.screencast.com/FGkLCu4JkcnDQ>

3. Loading information not announced by VoiceOver. - [WCAG 1.3.1 Info and Relationships \(Level A\)](#) - **Moderate**

Actual: VoiceOver is not announcing loading information when user activates 'Update Password' control present on 'Account' screen.

Expected: VoiceOver should announce loading information when user activates 'Update Password' control present on 'Account' screen.

Dev Recommendation: Utilize UIAccessibilityPostNotification to inform VoiceOver users about the loading state. Refer to:

<https://developer.apple.com/documentation/uikit/uiaccessibilitypostnotification>

Screenshot: <https://app.screencast.com/lajkFmR5ptmUa>

Companions

Path: Home-> Profile-> Companions

1. VoiceOver is announcing twice information on text - [WCAG 1.3.1 Info and Relationships \(Level A\)](#) - **Moderate**

Actual: VoiceOver is announcing twice information on 'Saved Companions' text present on 'Companions' screen.

Expected: VoiceOver should announce information only once on 'Saved Companions' text present on 'Companions' screen.

Dev Recommendation: Ensure that the accessibility properties are set correctly to prevent duplicate announcements. You can use the accessibilityLabel and accessibilityHint properties to provide concise and clear information to VoiceOver users.

Refer to:

<https://developer.apple.com/documentation/objectivec/namespace/1615093-accessibility-label>

Screenshot: <https://app.screencast.com/Z1eM1xf3c2GX7>

Delete an existing companion

Path: Home-> Profile-> Companions> Confirm Delete companion

No new individual issues found on this screen.

Saved Payments

Path: Home-> Profile-> Saved Payments

1. Hidden content announced by the screen reader - [WCAG 1.3.2 Meaningful Sequence \(Level A\)](#) – Significant

Actual: VoiceOver announces the hidden content after the 'Credit Cards We accept' text present on 'Save Payments' screen.

Expected: VoiceOver should not announce the hidden content through the screen reader.

Dev Recommendation: Use 'isAccessibilityElement' property with value 'no' to the hidden content.

Refer to:

<https://developer.apple.com/documentation/objectivec/1615141-isaccessibilityelement>

Screenshot: <https://app.screencast.com/hqmiYHS5zl3OI>

2. Potentially inaccessible elements - [WCAG 1.3.2 Meaningful Sequence \(Level A\)](#) – Significant

Actual: 'American express' and 'Discover' image contains content that could potentially form one or more separate accessibility elements.

Expected: 'American Express' and 'Discover' images should be reviewed to ensure that any meaningful content is exposed as separate accessibility elements

Dev Recommendation: Determine if any part of the content should be exposed as separate accessibility children.

Screenshot: <https://app.screencast.com/6ZcdvjGoCmFU7>

Add a new card

Book: Solo Passenger

Path: Home > Book

1. State and position missing for the tab control - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#)
– Significant

Actual: VoiceOver doesn't announce the State and position for the 'Round trip' tab control present on the 'book' screen

Expected: VoiceOver should announce the State and position as 'Round trip, tab, <selected/unselected>, 1 of <n> for the 'Round trip' tab control present on the 'book' screen

Dev Recommendation: Specify the component as "UIPickerView". This will enable VoiceOver users to understand that this is a tab and that they need to double tap in order to select a control. This can be done either through "UIPickerView" class. Provide a succinct label using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/uikit/uipickerview>

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibilitylabel>

Once the tab is selected, add the "screen change" function. It can be grouped or added as a table.

Another solution is to use accessibility labels, based on a boolean expression to output custom states based on what's selected.

Refer to:

https://developer.apple.com/documentation/uikit/accessibility/uiaccessibility/accessibility_traits

Screenshot: <https://app.screencast.com/qHH7wKYNCEv1p>

2. Incorrect role and label not announced by the screen reader - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) – Significant

Actual: VoiceOver announces the incorrect label as 'Arrow path.svg , Image' for the 'Reverse' button and role is not announced by the VoiceOver.

Expected: VoiceOver should announce the correct label as 'Reverse' for the 'Reverse'. Also, the VoiceOver should announce the role as 'button'

Dev Recommendation: Specify the component as "UIPickerView". This will enable VoiceOver users to understand that this is a button and that they need to double tap in order to select an option. This can be done either through the "UIPickerView" class. Also, provide a succinct label using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/uikit/uipickerview>

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibilitylabel>

Screenshot: <https://app.screencast.com/DqEeEisS3eoDs>

3. Label is not announced for the button - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) – Significant

Actual: VoiceOver does not announce the label for the '-' button present adjacent to 'Adults' text.

Similar issue has been observed for the below '-' control adjacent to 'Children' and 'Lap infants'

Expected: VoiceOver should announce the label as 'Decrease adults' for the '-' button present adjacent to 'Adults' text.

Also, the VoiceOver should announce the state as 'dimmed' when it is disabled

Dev Recommendation: Assign an "accessibilityLabel" property with the value "Decrease adults" to the button so that it is correctly announced by the screen reader.

Screenshot: <https://app.screencast.com/FqIJ7MvHUdrL3>

4. Label is not announced for the combo box - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) – Significant

Actual: VoiceOver does not announce the label for the 'From' combo box present on the 'book' screen.

Expected: VoiceOver should announce the label as 'From <selected item name>, Textfield, Combo box, Listbox, pop-up, Collapsed, Double tap to expand' for the 'From' combo box present on the 'book' screen.

Dev Recommendation: Assign an "accessibilityLabel" property with the value "From" to the combo box so that it is correctly announced by the screen reader.

Screenshot: <https://app.screencast.com/3HPAFF5IRpove>

5. Incorrect label announced by VoiceOver - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) – Significant

Actual: VoiceOver announces the incorrect label as 'Times, button' for the 'Close' button.

Expected: VoiceOver should announce the correct label as 'Close' for the 'Close'.

Dev Recommendation: Assuming the component used to be UIButton, please set the accessibilityLabel to accurately represent the button.

Apply UIAccessibilityTraitLink property to the element to ensure that the element is announced as <correct role>. Additionally, verify that the UIAccessibilityTraitButton is not enabled, through XCode or on the code neither.

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibility-label>

<https://developer.apple.com/documentation/objectivec/nsobject/uiaccessibility/1615181-accessibility-traits>

Screenshot: <https://app.screencast.com/q31IjHxzwN9bx>

6. VoiceOver not announcing descriptive information for controls - [WCAG 1.3.1 Info and Relationships \(Level A\)](#) – Significant

Actual: VoiceOver doesn't announce descriptive information for the 'Select date' button present on the 'book' page

Expected: VoiceOver should announce the descriptive information as "Select Depart date" and "Select Return date" for the 'Select date' button present on the 'book' page.

Dev Recommendation: Using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibility-label>

Screenshot: <https://app.screencast.com/rDjkFJ0ynbivL>

7. VoiceOver not announcing descriptive information for controls - [WCAG 1.3.1 Info and Relationships \(Level A\)](#) – Significant

Actual: VoiceOver doesn't announce descriptive information for the '<(Previous page)' and '>(Next page)' icon controls present on the 'Select outbound flight Date' page.

Expected: VoiceOver should announce the descriptive information as "Previous month" and "Next month" for the '<(Previous page)' and '>(Next page)' icon controls present on the 'Select outbound flight Date' page

Dev Recommendation: Using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibility-label>

Screenshot: <https://app.screencast.com/7I9BAB8KTZLYd>

8. 'No station found' information not announced by the VoiceOver - [WCAG 1.3.1 Info and Relationships \(Level A\)](#) – Significant

Actual: VoiceOver is not announcing the 'No Station found' information which appeared when users enter the wrong station on 'To' combobox present on the 'book' page.

Expected: VoiceOver should announce the 'No Station found' information which appeared when a user entered the wrong station on 'To' combobox present on the 'book' page.

Dev Recommendation: Use Accessibility Notifications:

When the "No Station found" message appears, ensure that it is announced by VoiceOver by posting an accessibility notification. This can be done using the `UIAccessibility.post(notification:argument:)` method.

Screenshot: <https://app.screencast.com/V6n3eifZYESKM>

9. Value and state missing for the control - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) – **Significant**

Actual: VoiceOver doesn't announce the value and expand state for the 'Guest' control present on the 'Book' page.

Expected: VoiceOver should announce the value and expand state for the 'Guest' control present on the 'Book' page.

Dev Recommendation: Use the Appropriate Component:

Ensure that the 'Guest' control is using a component that is accessible and can convey its state to VoiceOver. If it is a dropdown or a picker, consider using `UIPickerView` or a similar accessible component.

This will help VoiceOver users understand that the control is a combobox and that they need to interact with it to select an option.

Set Accessibility Properties:

Use the `accessibilityLabel` property to provide a clear and concise label for the control.

This label should describe the purpose of the control to the user.

Refer to:

<https://developer.apple.com/documentation/uikit/uipickerview>

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibilitylabel>

Screenshot: <https://app.screencast.com/Qp76ck2VISBlv>

10. VoiceOver not announcing descriptive information for control - [WCAG 1.3.1 Info and Relationships \(Level A\)](#) – **Recommendation**

Actual: VoiceOver doesn't announce the descriptive name information for the 'Search' control present on the 'Recent Searches' dialog.

Expected: VoiceOver should announce the descriptive name information as "Search <nnn>-<nnn>" for the 'Search' control present on the 'Recent Searches' dialog.

Dev Recommendation: Using ""accessibilityLabel"" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibility-label>

Screenshot: <https://app.screencast.com/EXsHICNY5GlcJ>

Select your Outbound flight

Path: Home > Book: Solo Passenger> Select your Outbound flight

1. Role and state not announced by VoiceOver - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) – Significant

Actual: VoiceOver doesn't announce the role for the '\$<n>' controls as '\$92' price present on the 'Select your Outbound fights' page.

and it is also not announcing the currently selected '\$<n>' control.

Expected: VoiceOver should announce the role as '\$<n>, button' for the '\$<n>' controls present on the 'Select your Outbound fights' page and state as selected

Dev Recommendation: Specify the component as "UIPickerView ". This will enable VoiceOver users to understand that this is a button and that they need to double tap in order to select a control. This can be done either through the "UIPickerView" class. Provide a succinct label using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/uikit/uipickerview>

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibility-label>

Screenshot: <https://app.screencast.com/MhkleFMm9HddK>

2. Role missing for the control - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) – Significant

Actual: VoiceOver doesn't announce the role for the 'View Flexible calendar' and 'Edit Search criteria' control present on the 'Select your Outbound fights' page.

Expected: VoiceOver should announce the role as 'Button' for the 'View Flexible calendar' and 'Edit Search criteria' control present on the 'Select your Outbound flights' page.

Dev Recommendation: Specify the component as "UIPickerView ". This will enable VoiceOver users to understand that this is a button and that they need to double tap in order to select a control. This can be done either through the "UIPickerView" class. Provide a succinct label using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/uikit/uipickerview>

<https://developer.apple.com/documentation/objectivec/1615181-accessibility-label>

Screenshot: <https://app.screencast.com/swrBJSbP0DzAD>

3. Alternative text missing for the icon. - [WCAG 1.1.1 Non-text Content \(Level A\)](#) - **Moderate**

Actual: VoiceOver does not announce the alternative text for the 'Swap' icon present on the 'Select your Outbound flights' page.

Expected: VoiceOver should announce the alternative text for the 'Swap' icon like 'Swap'.

Dev Recommendation: Assuming the component used to be UIImageView, please set the `isAccessibilityElement` to true.

Eg. `imageView.isAccessibilityElement = true`

Refer to:

<https://developer.apple.com/documentation/objectivec/1615141-isaccessibilityelement>

Screenshot: <https://app.screencast.com/3VkAHGlosBtbt>

4. VoiceOver not announcing descriptive information for controls - [WCAG 1.3.1 Info and Relationships \(Level A\)](#) – **Significant**

Actual: VoiceOver doesn't announce descriptive information for the 'Select' flight button present on the present in 'flight detail' tile on the 'Select your Outbound flight' page

Expected: VoiceOver should announce the descriptive information as "Select <flight name> flight" for the 'Select' flight button present on the present in 'flight detail' tile on the 'Select your Outbound flight' page

Dev Recommendation: Using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibility-label>

Screenshot: <https://app.screencast.com/yvFY5sfuxcUD5>

5. Role missing from the link. - **WCAG 4.1.2 Name, Role, Value (Level A)** – Significant

Actual: VoiceOver doesn't announce the role for the 'Support' link present on the 'Select your Outbound flights' page.

Expected: VoiceOver should announce the role as 'link' for the 'Support' link present on the 'Select your Outbound flights' page.

Dev Recommendation: Specify the component as "UIPickerView ". This will enable VoiceOver users to understand that this is a link and that they need to double tap in order to select a control. This can be done either through the "UIPickerView" class. Provide a succinct label using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/uikit/uipickerview>

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibility-label>

Screenshot: <https://app.screencast.com/sj3YE4ne1rqdu>

6. VoiceOver focus is not logical on some element - **WCAG 1.3.2 Meaningful Sequence (Level A)** – Moderate

Actual: VoiceOver focus order is not logical after the <GJT> text as focus is moving to 'BDL' instead of the 'Breeze thru' text present in 'flight detail' tile on the 'Select your Outbound flight' page.

Expected: VoiceOver focus order is not logical after the <GJT> text as focus is moving to 'BDL' instead of the 'Breeze thru' text present in 'flight detail' tile on the 'Select your Outbound flight' page.

Dev Recommendation: Review and Adjust Focus Order:

Ensure that the focus order follows a logical sequence that matches the visual layout and reading order. This can be achieved by setting the accessibilityElements property on the parent view to define a custom order for VoiceOver focus

Screenshot: <https://app.screencast.com/MM3u0JiXHapeg>

Flexible Date Calendar

Path: Home > Book: Solo Passenger> Select your Outbound flight> Flexible Date Calendar

1. Label is not announced for the button - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) – Significant

Actual: VoiceOver does not announce the label for the '<month>' control present on 'Flexible Date calendar' page.

Expected: VoiceOver should announce the label as '<month>' for the '<month>' control present on 'Flexible Date calendar' page.

Dev Recommendation: Assign an "accessibilityLabel" property with the value "<month>" to the button so that it is correctly announced by the screen reader.

Screenshot: <https://app.screencast.com/qCxrEi4zrkAum>

2. Role and state not announced by VoiceOver - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) – Significant

Actual: VoiceOver doesn't announce the role and state for the '\$<n>' and date controls present on the 'Flexible date Calendar' page. Also not announcing disabled for disabled date

Expected: VoiceOver should announce the role and state for the '\$<n>' and date controls present on the 'Flexible date Calendar' page and state as disabled.

Dev Recommendation: Specify the component as "UIPickerView ". This will enable VoiceOver users to understand that this is a button and that they need to double tap in order to select a control. This can be done either through the "UIPickerView" class. Provide a succinct label using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/uikit/uipickerview>

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibilitylabel>

Screenshot: <https://app.screencast.com/Rp44UVrsY0z3S>

3. VoiceOver not announcing descriptive information for date controls - [WCAG 1.3.1 Info and Relationships \(Level A\)](#) – Significant

Actual: VoiceOver doesn't announce descriptive information for date controls present on the 'Flexible Date calendar' screen

Expected: VoiceOver should announce the descriptive information as "1 <month> 1 <year>" for date controls present on the 'Flexible Date calendar' screen

Dev Recommendation: Using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibilitylabel>

Screenshot: <https://app.screencast.com/UrEQx9t5L9pGs>

4. VoiceOver focus is not moving on some element - [WCAG 1.3.2 Meaningful Sequence \(Level A\)](#) – Critical

Actual: VoiceOver focus is not moving to the 'Green' image and 'Info' icon present on the 'Flexible Date Calendar' page

Expected: VoiceOver focus should move to the 'Green' image and 'Info' icon present on the 'Flexible Date Calendar' page and also announce proper information.

Dev Recommendation: Ensure Accessibility Focus:

Make sure that the 'tick' and '\$(dollar)' icons are accessible elements. You can achieve this by setting their `isAccessibilityElement` property to true.

Screenshot: <https://app.screencast.com/rixGmpiOQT4IS>

Flight Search Results

Path: Home > Book: Solo Passenger> Select your Outbound flight> Flexible Date Calendar

Flight Options

Path: Home > Book: Solo Passenger> Select your Outbound flight> Select Flight

1. Role and state not announced by VoiceOver - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) – Significant

Actual: VoiceOver doesn't announce the role and state for the tiles controls present on the 'Flight options' screen.

Expected: VoiceOver should announce the role and state the tiles controls present on the 'Flight options' screen and state as selected.

Dev Recommendation: Specify the component as "UIPickerView ". This will enable VoiceOver users to understand that this is a button and that they need to double tap in order to select a control. This can be done either through the "UIPickerView" class. Provide a succinct label using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/uikit/uipickerview>

<https://developer.apple.com/documentation/objectivec/1615181-accessibilitylabel>

Screenshot: <https://app.screencast.com/tVo9nSTWa48Qp>

2. VoiceOver is announcing extra information on image [WCAG 1.1.1 Non-text Content \(Level A\)](#) - Significant

Actual: VoiceOver is announcing the extra information as "webp" on all seat images present on the 'Seat options' page.

Expected: VoiceOver should only announce relevant information on all seat images present on the 'Seat options' page.

Dev Recommendation: "Assuming the component used to be a UIImageView, please set the isAccessibilityElement to true.

Eg. imageView.isAccessibilityElement = true

Refer to:

<https://developer.apple.com/documentation/objectivec/1615141-isaccessibilityelement>

Screenshot: <https://app.screencast.com/WvNtrxC4z7hRZ>

Compare bundles

Path: Home > Book: Solo Passenger> Select your Outbound flight> Select Flight> Compare bundles

1. Incorrect role and label not announced by the screen reader - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) – Significant

Actual: VoiceOver announces the incorrect label as 'Circled latin small letter i' for the 'info' icon controls present on the 'Compare bundles' page and role is not announced by the VoiceOver.

Expected: VoiceOver should announce the correct label as 'Info' for the 'Reverse'. Also, the VoiceOver should announce the role as 'button'

Dev Recommendation: Specify the component as "UIPickerView ". This will enable VoiceOver users to understand that this is a button and that they need to double tap in order to select an option. This can be done either through the "UIPickerView" class. Also, provide a succinct label using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/uikit/uipickerview>

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibilitylabel>

Screenshot: <https://app.screencast.com/4npJQsb4XsQ0v>

2. Hidden content announced by the screen reader - [WCAG 1.3.2 Meaningful Sequence \(Level A\)](#) – Moderate

Actual: VoiceOver focus moves to the hidden content after the 'Compare bundles' button present on the 'Flight options' screen

Expected: VoiceOver focus should not move to the hidden content after the 'Compare bundles' button present on the 'Flight options' screen

Dev Recommendation: "Set the importance to "no" by providing android:importantForAccessibility=""no"" to hide the content from screen reader users. You can also do this at run time using the View.setImportantForAccessibility() API.

Refer to:

https://developer.android.com/reference/android/view/View.html#attr_android:importantForAccessibility

<https://developer.android.com/guide/topics/ui/accessibility/>

Screenshot: <https://app.screencast.com/MJa79wDSZy2Gt>

3. VoiceOver focus is not moving on some element - [WCAG 1.3.2 Meaningful Sequence \(Level A\)](#) – Critical

Actual: VoiceOver focus is not moving to the 'tick' and '\$(dollar)' icon present on the 'Compare bundle' screen

Expected: VoiceOver focus should move to the 'tick' and '\$(dollar)' icon present on the 'Compare bundle' screen and also announce proper information.

Dev Recommendation: Ensure Accessibility Focus:

Make sure that the 'tick' and '\$(dollar)' icons are accessible elements. You can achieve this by setting their `isAccessibilityElement` property to true.

Screenshot: <https://app.screencast.com/lqyM2QeajnjKq>

4. VoiceOver not announcing descriptive information for text - [WCAG 1.3.1 Info and Relationships \(Level A\)](#) – Significant

Actual: VoiceOver doesn't announce the row and column header information along with text under table present on the 'compare bundles' screen.

Expected: VoiceOver should announce the row and column header information as "<text> <column header> <row header> along with text under table present on the 'compare bundles' screen.

Dev Recommendation: Using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibility-label>

Screenshot: <https://app.screencast.com/hSaoCzSL5EAaU>

5. 'x'(Close) icon present on the 'Compare Bundles' dialog is missing useful accessibility information. - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) – Significant

Actual: VoiceOver doesn't announce name information for the 'x'(Close) icon present on the 'Compare Bundles' dialog

Expected: VoiceOver should announce the name information as "Close" for the 'x'(Close) icon present on the 'Compare Bundles' dialog

Dev Recommendation: Assuming the component used to be UIButton, please set the `accessibilityTraits` to `UIAccessibilityTraits.button`.

Eg. `btn.accessibilityTraits = UIAccessibilityTraits.button`

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615202-accessibility-traits>

Screenshot: <https://app.screencast.com/KISDHijziYuv>

No flex modal

Path: Home > Book: Solo Passenger> Select your Outbound flight> Select Flight> Compare bundles

No new individual issues found on this screen.

Seats

Path: Home > Book: Solo Passenger> Select your Outbound flight> Flexible Date Calendar>Select Seats

1. State and position missing for the tab control - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#)
– Significant

Actual: VoiceOver doesn't announce the State and position for the '<nnn>-<nnn> <n>h <n>m' tab control present on the 'Select Seat' screen.

Expected: VoiceOver should announce the State and position as '<nnn>-<nnn> <n>h <n>m, tab, <selected/unselected>, 1 of <n> for the '<nnn>-<nnn> <n>h <n>m' tab control present on the 'Select Seat' screen.

Dev Recommendation: "Specify the component as "UIPickerView ". This will enable VoiceOver users to understand that this is a tab and that they need to double tap in order to select a control. This can be done either through ""UIPickerView"" class. Provide a succinct label using ""accessibilityLabel"" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/uikit/uipickerview>

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibility-label>

Once the tab is selected, add the ""screen change"" function. It can be grouped or added as a table.

Another solution is to use accessibility labels, based on a boolean expression to output custom states based on what's selected.

Refer to:

https://developer.apple.com/documentation/uikit/accessibility/uiaccessibility/accessibility_traits

Screenshot: <https://app.screencast.com/RXyKzUpi2up84>

2. Label, role and Expand Collapse state missing for button.- [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) – Critical

Actual: VoiceOver doesn't announce name, role and <expand>/<collapsed> state information for '<username>' controls present on the 'Select Seats' screen.

Expected: VoiceOver should announce the name, role and <expand>/<collapsed> state information as "Guest <username>, button, <expand/Collapse> for '<username>' controls present on the 'Select Seats' screen.

Dev Recommendation: Make sure to add state(expand/collapsed) with VoiceOver. Please refer to the below accessibility doc for reference.

<https://developer.apple.com/documentation/objectivec/nsobject/uiaccessibility>

Screenshot: <https://app.screencast.com/KxBta10bgRx2p>

3. VoiceOver not announcing descriptive information for control - [WCAG 1.3.1 Info and Relationships \(Level A\)](#) – Recommendation

Actual: VoiceOver doesn't announce the descriptive name information for the 'Seats' control as it announces only the price of the seat present on the 'Select seats' page

Expected: VoiceOver should announce the descriptive name information for the 'Seats' control as it announces only the price of the seat present on the 'Select seats' page

Dev Recommendation: Using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibilitylabel>

Screenshot: <https://app.screencast.com/tg13LvswH9B4L>

Exit Row Requirements

No new individual issues found on this screen.

Bags

Path: Home > Book: Solo Passenger> Select your Outbound flight> Flexible Date Calendar>Select Seats> Select Bags

1. VoiceOver not announcing descriptive information for text - [WCAG 1.3.1 Info and Relationships \(Level A\)](#) – Significant

Actual: VoiceOver doesn't announce the descriptive information for the '<n>"H x <n>"W x <n>"D' text present in tile of the 'Add bags' page

Expected: VoiceOver should announce the descriptive information as "<n>"Hieght x <n>"Width x <n>"Depth" for the '<n>"H x <n>"W x <n>"D' text present in tile of the 'Add bags' page

Dev Recommendation: Using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibilitylabel>

Screenshot: <https://app.screencast.com/uAqctdG12z1gU>

2. Position not announced for the tab. - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) – Significant

Actual: VoiceOver doesn't announce position information for 'Outbound' and 'Return' tab controls present on the 'Add bags' screen.

Expected: VoiceOver should announce the position information as "selected, outbound, tab 1 of <n>" for 'Outbound' and 'Return' tab controls present on the 'Add bags' screen.

Dev Recommendation: Use Accessible Components:

Ensure that the tab controls are using accessible components that VoiceOver can recognize. For tab controls, consider using UITabBar or a similar component that inherently supports accessibility.

Set Accessibility Labels:

Use the accessibilityLabel property to provide a clear and concise label for each tab. This helps VoiceOver users understand the purpose of each tab.

Screenshot: <https://app.screencast.com/Bx0crhoJeusd6>

Guest info

Path: Home > Book: Solo Passenger> Select your Outbound flight> Flexible Date Calendar>Select Seats>Select Bags> Guest info

1. Label is not announced for the button - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) – Significant

Actual: VoiceOver does not announce the label for '?' control present at end of the '<Request special assistance>' option present on 'Guest info' page

Expected: VoiceOver should announce the label as 'Info' for the '?' control present at end of the '<Request special assistance>' option present on 'Guest info' page

Dev Recommendation: Assign an "accessibilityLabel" property with the value "Info" to the button so that it is correctly announced by the screen reader.

Screenshot: <https://app.screencast.com/0N78OQPOEa9Vv>

2. Expand Collapse state missing for button. - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) – Significant

Actual: VoiceOver doesn't announce expanded and collapsed state information for the 'Request Special assistance' and 'View Guest info' button present on 'Guest info' page

Expected: VoiceOver should announce the expanded and collapsed state information as "Request Special assistance, button, <expand/Collapse> for the 'Request Special assistance' and 'View Guest info' button present on 'Guest info' page

Dev Recommendation: Make sure to add state(expand/collapsed) with VoiceOver. Please refer to the below accessibility doc for reference.

<https://developer.apple.com/documentation/objectivec/nsobject/uiaccessibilit>

Screenshot: <https://app.screencast.com/lqVNp2Mautai>

3. No item founds information not announced by the VoiceOver - [WCAG 1.3.1 Info and Relationships \(Level A\)](#) – Significant

Actual: VoiceOver is not announcing the 'No item founds' text which appears when user types in 'Selected guest' combo box present on the 'Guest info' page

Expected: VoiceOver should announce the 'No item founds' text which appears when the user types in 'Selected guest' combo box present on the 'Guest info' page.

Dev Recommendation: Use Accessibility Notifications:

When the "No item founds" message appears, ensure that it is announced by VoiceOver by posting an accessibility notification. This can be done using the `UIAccessibility.post(notification:argument:)` method.

Screenshot: <https://app.screencast.com/1mQGilTit2QvI>

4. Text fail color contrast ratio - [WCAG 1.4.3 Contrast \(Minimum\) \(Level AA\)](#) – Significant

Actual: Color contrast ratio of the 'Select guest' text having '#CCCCCC' foreground color against '#FFFFFF' background color is measured to be at 1.6:1, which fails the minimum requirement.

Expected: 'Select guest' text has a regular font size, so as per the WCAG, the color contrast ratio of the text should be at least 4.5:1.

Dev Recommendation: Use darker foreground color #757575 for the highlighted text to pass the color contrast ratio.

Refer to:

<https://www.w3.org/WAI/WCAG22/Understanding/contrast-minimum.html>

Screenshot: - <https://app.screencast.com/n0o6wSagZfK26>

Extras

Path: Home > Book: Solo Passenger> Select your Outbound flight> Flexible Date Calendar>Select Seats>Select Bags> Guest info> Add Extras

1. Role missing for the control - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) – Significant

Actual: VoiceOver doesn't announce the role for the 'Edit' and 'Rental terms & condition' control present on the 'Add Extras' screen.

Expected: VoiceOver should announce the role as 'Button' for the 'Edit' and 'Rental terms & condition' control present on the 'Add Extras' screen.

Dev Recommendation: Specify the component as "UIPickerView ". This will enable VoiceOver users to understand that this is a button and that they need to double tap in order to select a control. This can be done either through the "UIPickerView" class. Provide a succinct label using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/uikit/uipickerview>

<https://developer.apple.com/documentation/objectivec/1615181-accessibility-label>

Screenshot: <https://app.screencast.com/7zAGp8qXpgg5E>

2. VoiceOver focus is moving on some decorative element - [WCAG 1.3.2 Meaningful Sequence \(Level A\)](#) – **Moderate**

Actual: VoiceOver focus is moving to the decorative image present above 'Fly with your pet' text present on 'Add Extras' page.

Expected: VoiceOver focus should not move to the decorative image present above 'Fly with your pet' text present on 'Add Extras' page.

Dev Recommendation: Review and Adjust Focus Order:

Ensure that the focus order follows a logical sequence that matches the visual layout and reading order. This can be achieved by setting the accessibilityElements property on the parent view to define a custom order for VoiceOver focus

Screenshot: <https://app.screencast.com/cX31AwqEXWxEH>

3. VoiceOver not announcing descriptive information for control - [WCAG 1.3.1 Info and Relationships \(Level A\)](#) – **Recommendation**

Actual: VoiceOver doesn't announce the descriptive name information on 'Select' controls under car tiles present on the 'Add Extras' screen.

Expected: VoiceOver should announce the descriptive name information as "Select <car name>" on 'Select' controls under car tiles present on the 'Add Extras' screen.

Dev Recommendation: Using ""accessibilityLabel"" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/objectivec/1615181-accessibility-label>

Screenshot: <https://app.screencast.com/6ngvMN68kE2lR>

4. Loading information not announced by VoiceOver - [WCAG 1.3.1 Info and Relationships \(Level A\)](#) – Moderate

Actual: VoiceOver is not announcing loading information when user activate 'Select' control present on 'Add Extras' page.

Expected: VoiceOver should announce loading information when user activate 'Select' control present on 'Add Extras' page.

Dev Recommendation: Utilize UIAccessibilityPostNotification to inform VoiceOver users about the loading state.

Refer to:

<https://developer.apple.com/documentation/uikit/uiaccessibilitypostnotification>

Screenshot: <https://app.screencast.com/xxLJ7s8hO7O5I>

No new individual issues found on this screen.

Booking: Multiple passengers

No new individual issues found on this screen.

However, issues of this screen is already covered in (Book: Solo Passenger, Select your outbound flight, Flexible Date Calendar, Flight Search Results, Flight Options, compare bundles, Seats, Guest info, Extras, Your Flight Details, Trip Summary, Payment method, Credit card and Pay monthly)

Flight Status

Path: Home >Hamburger> Flight Status

- VoiceOver focus is moving on some decorative element - [WCAG 1.3.2 Meaningful Sequence \(Level A\)](#) – Moderate

Actual: VoiceOver focus is moving to 'down arrow' decorative icon in 'From', 'To' and 'Flight date' dropdown present on 'Flight Status' page

Expected: VoiceOver focus should not move to the 'down arrow' decorative icon in 'From', 'To' and 'Flight date' dropdown present on 'Flight Status' page.

Dev Recommendation: Review and Adjust Focus Order:

Ensure that the focus order follows a logical sequence that matches the visual layout and reading order. This can be achieved by setting the accessibilityElements property on the parent view to define a custom order for VoiceOver focus

Screenshot: <https://app.screencast.com/M1u3NUJM4UFSq>

- Label is not announced for the button - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) – Significant

Actual: VoiceOver does not announce the label for the 'Swap' button below 'From' combo box present on 'Flight Status' page

Expected: VoiceOver should announce the label as 'Swap' for the 'Swap' button below 'From' combo box present on 'Flight Status' page.

Dev Recommendation: Assign an "accessibilityLabel" property with the value "Swap" to the button so that it is correctly announced by the screen reader.

Screenshot: <https://app.screencast.com/iXz5Q8vWV3kZ6>

- Status information not announced by VoiceOver - [WCAG 4.1.3 Status Messages \(Level AA 2.1 only\)](#) - Moderate

Actual: VoiceOver is not announcing status message information "No flight found" when user activates 'Search' control present on 'Flight Status' page.

Expected: VoiceOver should announce status message information "No flight found" when user activates 'Search' control present on 'Flight Status' page.

Dev Recommendation: Use ""UIAccessibility.Notification"" to convey status information to the assistive technology and post this notification using the post(notification:argument:) function.

Refer to:

<https://developer.apple.com/documentation/uikit/uiaccessibility/notification/1620176-announcement>

Screenshot: <https://app.screencast.com/uzbwKx2TIUrMc>

- Label and Expand Collapse state missing for dropdown - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) - **Moderate**

Actual: VoiceOver doesn't announce name and <expand>/<collapsed> state information for 'Flight date' controls present on the 'Flight Status' page.

Expected: VoiceOver should announce the name and <expand>/<collapsed> state information as "Flight date <Date>, button, <expand/Collapse> for 'Flight date' dropdown present on the 'Flight Status' page

Dev Recommendation: Make sure to add state(expand/collapsed) with VoiceOver. Please refer to the below accessibility doc for reference.

<https://developer.apple.com/documentation/objectivec/nsobject/uiaccessibility>

Screenshot: <https://app.screencast.com/nkniu8Na5Ufhh>

- No airport found information not announced by the VoiceOver - [WCAG 1.3.1 Info and Relationships \(Level A\)](#) – **Significant**

Actual: VoiceOver is not announcing the 'No airport found' information which appeared when a user entered the wrong airport on 'From' and 'To' combobox present on the 'Flight status' page.

Expected: VoiceOver should announce the 'No airport found' information which appeared when a user entered the wrong station on 'From' and 'To' combobox present on the 'Flight Status' page.

Dev Recommendation: Use Accessibility Notifications:

When the ""No airport found"" message appears, ensure that it is announced by VoiceOver by posting an accessibility notification. This can be done using the `UIAccessibility.post(notification:argument:)` method.

Screenshot: <https://app.screencast.com/dgRoXvS4YcWSQ>

- Asteriks (*) not defined for the required editfields [WCAG 1.3.1 Info and Relationships \(Level A\)](#) – **Significant**

Actual: Asteriks (*) not defined for the required 'From' and 'To' combo box present on the 'Flight Status' page.

Expected: Asteriks (*) should be defined for the required 'From' and 'To' combo box present on the 'Flight Status' page.

Dev Recommendation:

1. To the <input> add uiaccessibilitytrait hint to be identified if the item is required.
2. Edit the label and add required.

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615093-accessibilityhint>

<https://developer.apple.com/documentation/objectivec/nsobject/uiaccessibility>

Screenshot: <https://app.screencast.com/6gTbCPThH6bk3>

BreezePoints

Path: Home >Hamburger> BreezePoints

1. Incorrect role defined for link [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) - Significant

Actual: VoiceOver announces the incorrect role as 'Button' for the 'Apply Now' link present on the 'BreezePoints' page.

Expected: VoiceOver should announce the correct role as 'link' for the 'Apply Now' link present on the 'BreezePoints' page.

Dev Recommendation: Specify the component as "UIPickerView ". This will enable VoiceOver users to understand that this is a combo box and that they need to double tap to select an option. This can be done either through the "UIPickerView" class. Provide a succinct label using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/uikit/uipickerview>

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibilitylabel>

Screenshot: <https://app.screencast.com/m8QT9ZLzXc0F1>

Live chat

Path: Home >Hamburger> Live chat

1. VoiceOver not announcing position information for control. [WCAG 1.3.1 Info and Relationships \(Level A\)](#) – **Moderate**

Actual: VoiceOver is not announcing position information for 'Live chat' control present on 'hamburger' screen.

Expected: VoiceOver should announce the position information for 'Live chat' control as "Live chat, button 13 of 14" present on 'Live chat' screen

Dev Recommendation: Ensure that the screen reader should read the content in a list. It should not read it as normal text so instead of text view, use list view for the same.

Screenshot: <https://app.screencast.com/j6TX4fjeS6wuP>

2. Label is not announced for the editfield - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) – **Significant**

Actual: VoiceOver does not announce the label for the 'Message' edit field present on 'Live chat' page.

Expected: VoiceOver should announce the label as 'Message' for the 'Message' edit field present on 'Live chat' page.

Dev Recommendation: Assign an "accessibilityLabel" property with the value "Messages" to the button so that it is correctly announced by the screen reader.

Screenshot: <https://app.screencast.com/YTGF2FuxjUjNg>

Connect to WiFi

Path: Home >Hamburger >Connect to Wifi

No new individual issues found on this screen.

Bag Pricing

Path: <https://www.flybreeze.com>

1. VoiceOver focus is not retaining the trigger element. [WCAG 1.3.2 Meaningful Sequence \(Level A\)](#) – **Significant**

Actual: VoiceOver focus is moving to the 'back' button when the user activates the 'Done' button on the browser which appears on activating 'Bag pricing' control.

Expected: VoiceOver focus should retain on trigger control i.e., 'bag pricing' control when user activates the 'Done' button on the browser which appears on activating 'Bag pricing' control.

Dev Recommendation: Review and Adjust Focus Order:

Ensure that the focus order follows a logical sequence that matches the visual layout and reading order. This can be achieved by setting the accessibilityElements property on the parent view to define a custom order for VoiceOver focus

Screenshot: <https://app.screencast.com/7JfdNfEstQbca>

2. Incorrect role defined for tab controls - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) –
Moderate

Actual: "VoiceOver announces the incorrect role as 'Button' for the 'Round trip' and 'Oneway' tab present on the 'Bag Pricing' page.

and it is also not announcing the state and position of tab control.

Expected: VoiceOver should announce the correct role as 'tab' for the 'Round trip' and 'Oneway' tab present on the 'Bag Pricing' page.

and it should announce state and position as selected and '1 of <n>'

Dev Recommendation: Specify the component as "UIPickerView ". This will enable VoiceOver users to understand that this is a combo box and that they need to double tap to select an option. This can be done either through the "UIPickerView" class. Provide a succinct label using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/uikit/uipickerview>

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibilitylabel>

Screenshot: <https://app.screencast.com/vN7FadDjLDp0l>

3. Label is not announced for the combo box - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) –
Significant

Actual: VoiceOver does not announce the label for the 'From' and 'To' combo box present on 'Bag Pricing' page

Expected: VoiceOver should announce the label as 'From' for the 'From' and 'To' combo box present on 'Bag Pricing' page.

Dev Recommendation: Assign an "accessibilityLabel" property with the value "From" to the combobox so that it is correctly announced by the screen reader.

Screenshot: <https://app.screencast.com/bdUiKYolJ8Amk>

4. Label is not announced for the button - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) – **Significant**

Actual: VoiceOver does not announce the label for the '-' control present on the 'Add Guest' pop up.

Expected: VoiceOver should announce the label as 'decrease' for the '-' control present on the 'Add Guest' pop up.

Dev Recommendation: Assign an "accessibilityLabel" property with the value "decrease" to the combobox so that it is correctly announced by the screen reader.

Screenshot: <https://app.screencast.com/QUu7VZwLlrAPk>

5. 'No station found information not announced by the VoiceOver - [WCAG 1.3.1 Info and Relationships \(Level A\)](#) – **Significant**

Actual: VoiceOver is not announcing the 'No stations found' information which appeared when users enter the wrong airport on 'From' combobox present on the 'Bag Pricing' page.

Expected: VoiceOver should announce the 'No stations found' information which appeared when a user entered the wrong station on 'From' combobox present on the 'Bag Pricing' page.

Dev Recommendation: Use Accessibility Notifications:

When the "No Station found" message appears, ensure that it is announced by VoiceOver by posting an accessibility notification. This can be done using the `UIAccessibility.post(notification:argument:)` method.

Screenshot: <https://app.screencast.com/B7o4XWtlodig8>

6. Expand state missing for button. - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) – **Significant**

Actual: VoiceOver does not announce an expanded state for the 'Add Guest' button present on the 'Bag Pricing' page.
and also announcing role information twice

Expected: VoiceOver should announce the expanded state as 'Expand' for the 'Add Guest' button present on the 'Bag Pricing' page and role information once.

Dev Recommendation: Make sure to add state(expand/collapsed) with VoiceOver. Please refer to the below accessibility doc for reference.

<https://developer.apple.com/documentation/objectivec/nsobject/uiaccessibility>

Screenshot: <https://app.screencast.com/BzUwLAX7qYLaL>

Destination

Path: <https://www.flybreeze.com/shopping/en-us/>

1. VoiceOver is announcing extra information on control [WCAG 1.3.1 Info and Relationships \(Level A\)](#) - Significant

Actual: VoiceOver is announcing the extra information as "fc-booking-journey-type-aria-label" on 'Round trip' control present on the 'Destination' page.

Expected: VoiceOver should only announce relevant information on 'Round trip' control present on the 'Destination' page.

Dev Recommendation: Using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibility-label>

Screenshot: <https://app.screencast.com/ZHbwEg3BFexR6>

2. VoiceOver focus is not moving on some element - [WCAG 1.3.2 Meaningful Sequence \(Level A\)](#)

Actual: VoiceOver focus is not moving to the 'Please provide us with a <departure>/<arrival> location' error message present on the 'Destination' page.

Expected: VoiceOver focus should move to the 'Please provide us with a <departure>/<arrival> location' error message present on the 'Destination' page and also announce proper information.

Dev Recommendation: Ensure Accessibility Focus:

Make sure that the 'Please provide us with a <departure>/<arrival> location error message are accessible elements. You can achieve this by setting their isAccessibilityElement property to true.

Screenshot: <https://app.screencast.com/NVtNpd8tOLkJd>

- Asteriks (*) not defined for the required buttons [WCAG 1.3.1 Info and Relationships \(Level A\)](#) – Significant

Actual: Asteriks (*) not defined for the required 'From' and 'To' buttons present on the 'Destinations' page.

Expected: Asteriks (*) should be defined for the required 'From' and 'To' buttons present on the 'Destinations' page.

Dev Recommendation:

1. To the <input> add uiaccessibilitytrait hint to be identified if the item is required.
2. Edit the label and add required.

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615093-accessibility-hint>

<https://developer.apple.com/documentation/objectivec/nsobject/uiaccessibility>

Screenshot: <https://app.screencast.com/kOcj9Vh0qpmCN>

- Hidden content announced by the screen reader. [WCAG 1.3.2 Meaningful Sequence \(Level A\)](#) – Significant

Actual: VoiceOver announces the hidden content just before the carousel slider as 'button'.

Expected: VoiceOver should not announce the hidden content through the screen reader.

Dev Recommendation: Use 'isAccessibilityElement' property with value 'no' to the hidden content.

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615141-isaccessibilityelement>

Screenshot: <https://app.screencast.com/ywpXCjNDwulPE>

- Slide picker tab control icons fail color contrast ratio - [WCAG 1.4.11 Non-text Contrast \(Level AA 2.1 only\)](#) - Significant

Actual: Color contrast ratio of the slide picker tab control icons having '#BDBDBD' foreground color against '#FFFFFF' background color is measured to be at 1.9:1, which fails the minimum requirement.

Expected: Slide picker tab control is a graphical object, so as per the WCAG, the color contrast ratio of this checkbox should be at least 3.0:1 against the adjacent colors.

Dev Recommendation: Use Foreground Color: #949494 with Background Color: #FFFFFF (Gives Color Contrast Ratio: 3.2:1) for the 'slider' icon.

Refer to:

<https://www.w3.org/WAI/WCAG22/Understanding/non-text-contrast.html>

Screenshot: <https://app.screencast.com/GgPxI3rNuhk76>

- Accessible name does not start from the visible button with name - [WCAG 2.5.3 Label in Name \(Level AA 2.1 only\)](#) - Moderate

Actual: Accessible name does not start from the 'Book now' button present on the 'Destination' page.

Expected: Accessible name should start from the visible 'Book now' button present on the 'Destination' page.

Dev Recommendation: Ensure that the accessibility label for the "Book now" button starts with the visible text "Book now." You can set the accessibility label explicitly if needed.

Refer to:

<https://www.w3.org/WAI/WCAG22/Understanding/non-text-contrast.html>

Screenshot: <https://app.screencast.com/78Ry6f1egNZIH>

8. Expand Collapse state missing for menu button. [WCAG 4.1.2 Name, Role, Value \(Level A\)](#)- Moderate

Actual: VoiceOver announces only role and label for the 'About breeze' expandable control and state as 'Expand/Collapse' is not announced by the VoiceOver.

Expected: VoiceOver should announce the state as 'Expand/Collapse' for the 'About breeze' expandable control

Also, the screen reader should announce the initial state as 'Collapsed'.

Dev Recommendation: Make sure to add state(expand/collapsed) with VoiceOver.

Please refer to the below accessibility doc for reference.

<https://developer.apple.com/documentation/objectivec/nsobject/uiaccessibility>

Screenshot: <https://app.screencast.com/LZVlahCzErARr>

9. VoiceOver is announcing extra information on expandable control - [WCAG 1.3.1 Info and Relationships \(Level A\)](#) - Significant

Actual: VoiceOver is announcing the extra information as "keyboard underscore arrow underscore down" on 'About Breeze', 'Guest Services', 'Site Support' and 'Policies' control present on the 'Destination' page.

Expected: VoiceOver should only announce relevant information on 'About Breeze', 'Guest Services', 'Site Support' and 'Policies' control present on the 'Destination' page.

Dev Recommendation: Using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibilitylabel>

Screenshot: <https://app.screencast.com/LZVlahCzErARr>

10. Incorrect label announced by the screen reader - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) – Significant

Actual: VoiceOver announces the incorrect label as load underscore less underscore pagination underscore label underscores routes' for the 'View more/ View less' button present on 'Destination' page.

Expected: "VoiceOver should announce the correct label as 'View more/ View less' for the 'View more/ View less' button present on the 'Destination' page.

Dev Recommendation: Specify the component as "UIPickerView ". This will enable VoiceOver users to understand that this is a button and that they need to double tap in order to select an option. This can be done either through the "UIPickerView" class. Also, provide a succinct label using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/uikit/uipickerview>

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibilitylabel>

Screenshot: <https://app.screencast.com/05IY85FT6BJ2R>

Inflight Experience

Path:

https://www.flybreeze.com/page/breeze-onboard-offering?utm_source=breeze_apps&utm_medium=internal_referral&appId=4790056685

1. Alternative text missing for some images. [WCAG 1.1.1 Non-text Content \(Level A\)](#) - Significant

Actual: VoiceOver does not announce the descriptive alternative text for some images.

Expected: VoiceOver should announce the descriptive alternative text for some images like '<description of images>'.

Dev Recommendation: Using "accessibilityLabel" property so that the user can better understand the use of the element.

Best practices for alternative text:

- Less than 125 characters long.
- Don't start the alt text with expressions such as "picture of..." or "image of..."
- Describe the image with as much detail as possible.

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibilitylabel>

<https://developer.apple.com/documentation/uikit/accessibility/uiaccessibility>

Screenshot: <https://app.screencast.com/UQPO1LrAJClqL>

Breeze Easy™ Visa

Path: <https://www.flybreeze.com/page/card-benefits>

1. VoiceOver not announcing descriptive information for control - [WCAG 1.3.1 Info and Relationships \(Level A\)](#) – **Recommendation**

Actual: VoiceOver doesn't announce the descriptive name information on 'Terms Apply' controls present on the 'Breeze Easy™ Visa' page.

Expected: VoiceOver should announce the descriptive name information as "Select <car name>" on 'Terms Apply' controls present on the 'Breeze Easy™ Visa' page.

Dev Recommendation: Using ""accessibilityLabel"" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibilitylabel>

Screenshot: <https://app.screencast.com/RC419nlqd9HR1>

1. VoiceOver is announcing extra information on combo box [WCAG 1.3.1 Info and Relationships \(Level A\)](#) - Significant

Actual: VoiceOver is announcing the extra information as

"cmp-location-selector-label-collapsed-message" on 'From' combobox present on the 'BreezePoints' page.

Same issue repro on the 'From', 'To', 'Departure', 'Return', 'Cancel' and 'Slider tab' control.

Expected: VoiceOver should only announce relevant information on 'From' combobox present on the 'BreezePoints' page.

Dev Recommendation: Using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibility-label>

Screenshot: <https://app.screencast.com/S82B85Qlq3Cjc>

2. Incorrect label announced by the screen reader - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) – Significant

Actual: VoiceOver announces the incorrect label as 'Burger-menu' for the 'Hamburger' menu button present on 'BreezePoints' page.

Expected: "VoiceOver should announce the correct label as 'Hamburger' for the 'Hamburger' menu button present on 'BreezePoints' page.

Dev Recommendation: Specify the component as "UIPickerView ". This will enable VoiceOver users to understand that this is a button and that they need to double tap in order to select an option. This can be done either through the "UIPickerView" class. Also, provide a succinct label using "accessibilityLabel" property so that the user can better understand the use of the element.

3. VoiceOver focus order not logical [WCAG 1.3.2 Meaningful Sequence \(Level A\)](#) – Significant

Actual: Hamburger menu is not getting closed automatically as soon as the VoiceOver focus moves out of it when navigate through swipe gesture.

Expected: Hamburger menu should get closed automatically as soon as the VoiceOver focus moves out of it when navigate through swipe gesture or the VoiceOver focus should not move out of the hamburger menu.

Dev Recommendation: Utilize UIAccessibilityPostNotification to notify VoiceOver users when the focus moves out of the hamburger menu, and programmatically close the menu. This will enhance the accessibility experience by ensuring that users are aware of the menu's state and that it behaves as expected.

Refer to:

<https://developer.apple.com/documentation/uikit/uiaccessibilitypostnotification>

Screenshot: <https://app.screencast.com/aZEDNYw29V46Q>

4. VoiceOver focus is moving on some decorative element - [WCAG 1.3.2 Meaningful Sequence \(Level A\)](#) – **Moderate**

Actual: VoiceOver focus is moving to 'down arrow' decorative icon in 'Display in' dropdown present on 'BreezePoints' page

Expected: VoiceOver focus should not move to the 'down arrow' decorative icon in 'Display in' dropdown present on 'BreezePoints' page

Dev Recommendation: Review and Adjust Focus Order:

Ensure that the focus order follows a logical sequence that matches the visual layout and reading order. This can be achieved by setting the accessibilityElements property on the parent view to define a custom order for VoiceOver focus

Screenshot: <https://app.screencast.com/Z3NbDhH7fxv8y>

5. Incorrect role defined for tab controls - [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) – **Moderate**

Actual: VoiceOver announces the incorrect role as 'Button' for the 'Map view' and 'List view' tab present on the 'BreezePoints' page and it is also not announcing the state and position of tab control.

Expected: VoiceOver should announce the correct role as 'tab' for the 'Map view' and 'List view' tab present on the 'BreezePoints' page and it should announce state and position as selected and '1 of <n>'

Dev Recommendation: Specify the component as "UIPickerView ". This will enable VoiceOver users to understand that this is a combo box and that they need to double tap to select an option. This can be done either through the "UIPickerView" class. Provide a succinct label using "accessibilityLabel" property so that the user can better understand the use of the element.

Actual: VoiceOver doesn't announce the role for the 'Flight' radio button

Expected: VoiceOver should announce the role as radio button' for the 'Flight' radio button

Dev Recommendation: Specify the component as "UIPickerView". This will enable VoiceOver users to understand that this is a button and that they need to double tap in order to select a control. This can be done either through "UIPickerView" class. Provide a succinct label using "accessibilityLabel" property so that the user can better understand the use of the element.

Refer to: Assuming the component used to be UIButton, please set the accessibilityLabel to accurately represent the button.

Apply UIAccessibilityTraitLink property to the element to ensure that the element is announced as <correct role>. Additionally, verify that the UIAccessibilityTraitButton is not enabled, through XCode or on the code neither.

<For radiobuttons/checkboxes>

1. Group together the component and its label to be announced in the same focus by VoiceOver.
2. Provide the label and the role of the component through accessibilityLabel (e.G, "Credit card, radio button").
3. Apply UIAccessibilityTrait to convey to VoiceOver the "selected" state of the element, when needed.

Check In

Path: Home >My Trips-> Find Existing Trip-> Select any Trip-> Check In-> Extra Nice Details

No new individual issues found on this screen.

Path: Home >My Trips-> Find Existing Trip-> Select any Trip-> Check In-> Extra Nice Details-> Hazardous Materials

1. Missing role of links- [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) – **Moderate**

Actual: VoiceOver doesn't announce the role for the 'Contract of carriage' & 'click here for more info' & 'click here for more information' links.

Expected: VoiceOver should announce the role as 'link' for the 'Contract of carriage' & 'click here for more info' & 'click here for more information' links.

Dev Recommendation:

Assuming the component used to be Ullink. Please set the accessibilityTraits to UIAccessibilityTraits.link.

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615202-accessibilitytraits>

Screenshot: <https://app.screencast.com/KxkoZYeFbct1A>

Cancel and Refund Booking

Path: Home >My Trips-> Find Existing Trip-> Select any Trip-> Cancel Flight-> Cancellation Summary

1. Insufficient color contrast ratio for text - [WCAG 1.4.3 Contrast \(Minimum\) \(Level AA\)](#) - **Moderate**

Actual: Color contrast ratio of the grey color Non Stop text with white background having '#C8CBD8' foreground color against '#FFFFFF' background color is measured to be at 1.6:1, which fails the minimum requirement.

Expected: Grey color 'Non Stop' text with white background has a regular font size, so as per the WCAG, the color contrast ratio of the link text should be at least 4.5:1.

Dev Recommendation: Use darker foreground color for the highlighted text to pass the color contrast ratio.

Refer to:

<https://www.w3.org/WAI/WCAG22/Understanding/contrast-minimum.html>

Screenshot: <https://app.screencast.com/vKHhsKaHN1B8i>

2. Missing role, state & name of button- **WCAG 4.1.2 Name, Role, Value (Level A)** – **Moderate**

Actual: Missing role and state of the outbound button, also incorrect name is defined for the same.

Expected: Role as button and state as expanded/collapsed should be defined for the outbound button, correct name should be defined for the same.

Dev Recommendation: Assuming the component used to be UIButton, please set the accessibilityTraits to UIAccessibilityTraits.button.

Eg. btn.accessibilityTraits = UIAccessibilityTraits.button

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615202-accessibilitytraits>

Screenshot: <https://app.screencast.com/K8VyfpVt0DX7d>

3. Unnecessary alt defined for decorative icons **1.1.1 Non-text Content (Level A)** – **Moderate**

Actual: Unnecessary alt defined for add and dropdown icons.

Expected: Unnecessary alt text should not be defined for decorative icon.

Dev Recommendation: Assuming the component used to be UIImageView, please set the isAccessibilityElement to false for all the unnecessary hidden UIComponents.

Eg. component.isAccessibilityElement = false

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615141-isaccessibilityelement>

Booking Cancellation/ Credit to BreezePoints

Path: Home > My Trips-> Find Existing Trip-> Select any Trip-> Cancel Flight-> Cancellation Summary-> Get flight credit-> Flight Credit confirmed

1. Unnecessary alt defined for background image [1.1.1 Non-text Content \(Level A\)](#) – **Moderate**

Actual: Unnecessary alt is defined for decorative image

Expected: Unnecessary alt text should not be defined for decorative image.

Dev Recommendation: Assuming the component used to be UIImageView, please set the `isAccessibilityElement` to false for all the unnecessary hidden UIComponents.
Eg. `component.isAccessibilityElement = false`

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615141-isaccessibilityelement>

Screenshot: <https://app.screencast.com/hPCzwpDEvXIWz>

Post-Booking: Multiple passengers

No new individual issues found on this screen.

However, issues of this screen is already covered in (Post-Booking: Multiple passengers, Trip, Car Details, Flight Options, Change Trip, Change Trip Summary, Check In, Cancel and Refund Booking, Booking Cancellation/ Credit to BreezePoints)

Add a boarding pass to your wallet

Path: Home > Check in-> Extra nice details-> Hazardous Materials-> Select seat-> Add a boarding pass to your wallet (iOS and Android)

1. Hidden content announced by the screen reader. [WCAG 1.3.2 Meaningful Sequence \(Level A\)](#) – Significant

Actual: VoiceOver focus lands on the hidden elements and announces the previous/next boarding pass dimmed button.

Expected: VoiceOver should not announce the hidden content through the screen reader.

Dev Recommendation: Assuming the component used to be UITextField, please set the isAccessibilityElement to false for all the unnecessary hidden UIComponents.

Eg. component.isAccessibilityElement = false

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615141-isaccessibilityelement>

Screenshot: <https://app.screencast.com/LIBYVoKqsDKfA>

2. Role missing for the control [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) – **Moderate**

Actual: VoiceOver doesn't announce the role for the 'Add to Apple wallet' & 'Add to Google Wallet' buttons.

Expected: VoiceOver should announce the role as 'Button' for the 'Add to Apple wallet' & 'Add to Google Wallet' buttons.

Dev Recommendation: Assuming the component used to be UIButton, please set the accessibilityTraits to UIAccessibilityTraits.button.

Eg. btn.accessibilityTraits = UIAccessibilityTraits.button

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615202-accessibilitytraits>

Screenshot: <https://app.screencast.com/mZmnbkYepd5iX>

3. Incorrect alt defined for Breeze logo [1.1.1 Non-text Content \(Level A\)](#) – **Moderate**

Actual: Incorrect alt text as 'boarding pass background.svg' is defined for Breeze logo.

Expected: Correct and descriptive alt text should not be defined for Breeze logo.

Dev Recommendation: Using "accessibilityLabel" property so that the user can better understand the use of the element.

Best practices for alternative text:

- Less than 125 characters long.
- Don't start the alt text with expressions such as "picture of..." or "image of..."
- Describe the image with as much detail as possible.

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615181-accessibility-label>

<https://developer.apple.com/documentation/uikit/accessibility/uiaccessibility>

Screenshot: <https://app.screencast.com/nIEWIpbHVcaQ6>

4. Unnecessary alt defined for background image **[1.1.1 Non-text Content \(Level A\)](#)** –
Moderate

Actual: Unnecessary alt as ‘boarding pass background.svg’ is defined for background image

Expected: Unnecessary alt text should not be defined for background image.

Dev Recommendation: Assuming the component used to be UIImageView, please set the `isAccessibilityElement` to false for all the unnecessary hidden UIComponents.

Eg. `component.isAccessibilityElement = false`

Refer to:

<https://developer.apple.com/documentation/objectivec/nsobject/1615141-isaccessibilityelement>

Screenshot: <https://app.screencast.com/nLqC5PpljiFu>

5. Unnecessary alt defined for decorative icon **[1.1.1 Non-text Content \(Level A\)](#)** –
Moderate

Actual: Unnecessary alt as “enUS add to google wallet” is defined for decorative icon

Expected: Unnecessary alt text should not be defined for decorative icon.

Dev Recommendation: Assuming the component used to be UIImageView, please set the `isAccessibilityElement` to false for all the unnecessary hidden UIComponents.

Eg. `component.isAccessibilityElement = false`

Refer to:
